

*Stax® Files*

*Stax Files*

### Stax Files

JETER SYSTEMS' Stax file was introduced in 1974. In the past 20 years, we have sold thousands and thousands of these shelves throughout the world. This filing cabinet was always designed to be just that – a filing cabinet. It should not be confused with less expensive, open-sided four-post-type equipment. Every JETER Stax cabinet is closed at the back and at both sides. Its dimensions are designed to be exactly correct for all different sized file folders.

### *The Most Space-Efficient Cabinets In The Industry*

Stax cabinets are the most space efficient and offer the most file capacity. No space is wasted for posts or uprights because each shelf is its own strong, supporting structure.

### *Steel-To-Steel Interconnect System For Solid Attachment*

All JETER cabinets are modular, meaning that each shelf goes together shelf by shelf with the use of seven convenient, easy-to-use rivet fasteners. The cabinets have a steel interconnect mechanism to ensure that they stay firmly interconnected and attached. Since these products are modular, they are flexible in height and can be added to at any time.

*JETER cabinets are available in a variety of widths and sizes.*

### *Lower Top Row*

Because Stax files have only a  $\frac{3}{8}$ " shelf lip, the efficiencies of these units vertically is far greater than thick, shelf equipment. JETER cabinets have a lower top row. Our thin shelf is supported by our unique, integral-welded file support dividers.

### *Strategically Placed Dividers For Faster Filing Actions – As Well As Superior Strength*

The support dividers are placed strategically across the width of each shelf. Differing numbers of dividers are added to wider shelf units, with the idea to create small openings of approximately 6-7" in width so that the file folders remain in an upright manner and that their color coding remains in perfect alignment. This enables the file folder to be removed and refilled with ease. These dividers support and make the cabinets very rigid, individual units, without the need for space-wasting support posts, as is required with cantilevered and/or four-post shelving.

### *No Equipment On The Market Can Equal The Filing Capacity Per Square Foot*

The full width of JETER cabinets is available for folders. Most 36" units sold by competitors have less than 36" available for folders. JETER cabinets accept folders equal to the full width of the unit. For example, JETER 48" units have 48" of filing capacity.

*JETER Stax files allow you to store all types of media in one storage unit.*

### *Cabinets Designed For The Size Of Folders They Contain*

On letter-size units, we have provided a proper folder clearance at 10 $\frac{1}{4}$ ". This is a comfortable dimension for end tab folders, which are generally 9 $\frac{1}{2}$ " high. Our legal-size units are spaced more generously because legal records tend to be held in accordion-style pockets that require more vertical space. Our cabinets are designed specifically for the size media they contain, meaning that the proper dimensions are available to allow folders to enter and exit the file conveniently, comfortably and swiftly.

### *Mixed Media Storage Within One Cabinet*

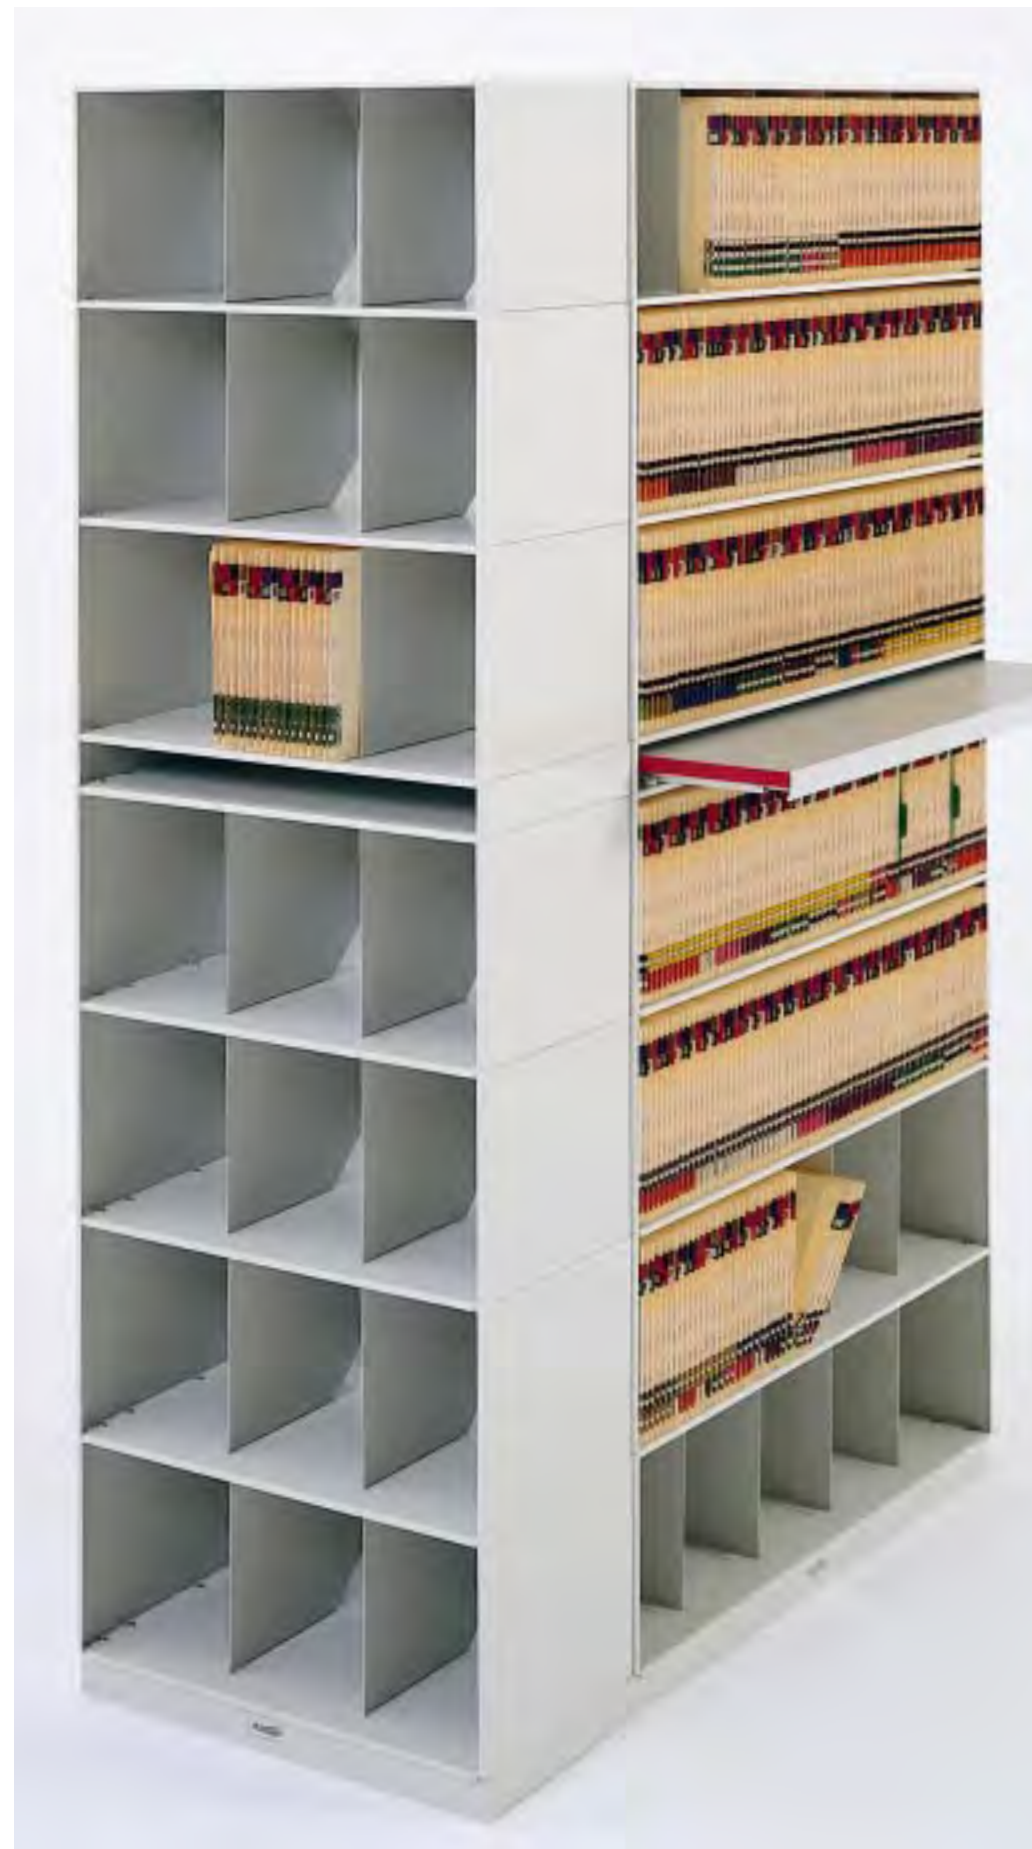

Media can be mixed with folders, binders and computer printouts. For small offices, one cabinet can be purchased and reconfigured as needs change.

### *Variety Of Sizes To Meet Customers' Needs*

JETER makes Stax cabinets in a variety of sizes. Most of our cabinets come in standard width sections of 24", 36", 42" and 48" to maximize the available floor space. See chart on page 7 for available sizes. From the beginning, these heavily reinforced cabinets were designed to be strong, allowing them to be placed safely on our Trax and E-Z Roller Systems. Stax cabinets are available in letter, legal, X-ray and mini for the most efficient storage of a wide variety of media.

### *Variety Of Bases*

Bases come in 2" and 4".

### *Superior Quality Paint Finish*

All surfaces are painted with superior quality, durable baked enamel. Colors are electronically matched so new and old units can intermix without color variation from year to year.

### *Cabinet Depths Allow For Better Visibility Of Folders*

Each size of JETER filing equipment has been designed for the specific media it is to contain. As a result, all of our cabinets allow the file folder tabs to stick out slightly from the filing cabinet for better visibility. Never can the folders be recessed into the cabinet and away from the available light in the file room.

### *Color Selection*

Neutral colors offer a noncompetitive background for our precise color-coded filing systems. Neutral Lite and Light Gray are the two standard colors. Special colors are available to match any office decor.

### *Heavy-Duty Modular Equipment vs. Light-Duty Modular Equipment*

JETER shelves are considerably heavier than most stackable shelves. We use heavier steel and more reinforcement to ensure that our cabinets are strong. Lighter-weight systems do not stand up well when used on mobile systems. They simply cannot take the shock through their unreinforced corners when the units come to a halt against the bumpers. Because these units are much weaker, their structure is lessened to the point that they are also more difficult to move with records intact.

Triangular, Welded  
Corner Reinforcements For  
Strength And Stability

For maximum strength and stability, JETER welds triangular corner gussets to reinforce the corners of each shelf cabinet. This provides strength, especially against the stress created when used in a mobile system.

Front Shelf Edges

All Stax equipment have small front shelf edges that never conceal file folders or cause them to snag upon removal from the file.

Cabinets Can Be Moved  
Fully Loaded

One of the most important advantages of JETER Stax equipment comes on moving day. JETER filing cabinets can be moved with their contents intact. Almost all other filing equipment requires the files to be removed and boxed, and the equipment knocked down for transportation and reassembly at the new location.

Superior Quality  
Work Shelves

For referencing material while at the file, we provide high quality, roll-out work shelves for most of our filing units, which allow both hands to be free for filing. Shelf files typically do not offer a proper horizontal work surface to allow a file operator to insert pages into a folder or to search for specific documents at the file. Our high-quality, durable, hard-working shelves are available in most sizes.

Spacers offer storage for “to be filed” material and “out folders”. The spacer keeps each shelf the same in height with those utilizing work shelves.

A wide variety of Stax  
and SuperStax are  
available from stock.  
Use this chart to pick  
the size that's right  
for you.

*Legal-Size Stax Cabinets  
Designed For Taller Records*

JETER's legal-size Stax cabinets are designed to work with taller legal records. Unlike some companies, our legal-size units are  $\frac{3}{8}$ " greater per shelf in the clear file folder opening. This allows for the greater overall height often found with legal records. Many legal records use expansion pockets, which force internal folders to be taller than their normal profile. The extra spacing offered with JETER legal-size cabinets allows for the additional space required for this specific media. Legal depth shelves for letter-size ring binders are now available. Many legal applications require storage space for ring binders, and our ring-binder-size tiers allow for the correct height. They can be intermixed and located anywhere in a stack of legal-size shelves.

*X-ray Stax Cabinets...  
Most Efficient In Space  
Savings*

JETER's X-ray-size Stax cabinets incorporate the 3⁄8" lip design for rigid shelf strength and low shelf profiles. The top row of this 5-high unit is often many inches less in height than competitive systems. Do not confuse these high-quality, fully welded filing cabinets with open industrial shelf-type units. The dividers in our units are welded into place and designed to hold up under the rigors of this heavy media.

Mini-Size Cabinets For Smaller Than Letter-Size Documents

The mini-size cabinet was developed by JETER in order to meet the growing needs of those that had smaller than letter-size documents. Our mini cabinets are often used by dermatologists and overwhelmingly accepted in the optical field. They are less than 9" in depth, with a height of less than 7", which means that they can be stacked vertically and save a tremendous amount of space in comparison to letter-size systems. The mini product is available in three widths to maximize the capacity of available office space. Mini-size folders are designed to be used with this system.
