Introducing

SmartStrip™

Labeling System for Shelf Filing

Work
Smarter,
not harder

Never apply
individual
labels again

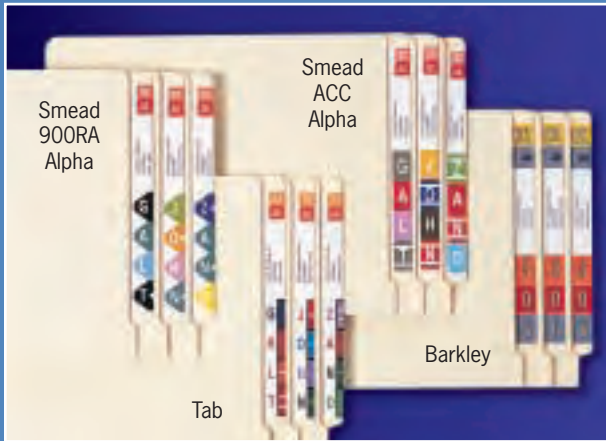

All of your indexing on one label.

The SmartStrip™ Labeling System gives you the efficiency of color coded indexing without the time-consuming task of applying individual colored labels to your shelf filing products. Simply enter your file headings on your PC and click to print a single label strip complete with color coding, text and barcodes, ready to apply to your favorite Smead end tab filing products.

Match your existing system.

SmartStrip™ Software includes label designs that match the colors and formats of the most popular color coding systems in use today. Choose the design that matches your filing system and enter your file headings. Smartstrip™ automatically formats the label to match the colors and style of your existing files.

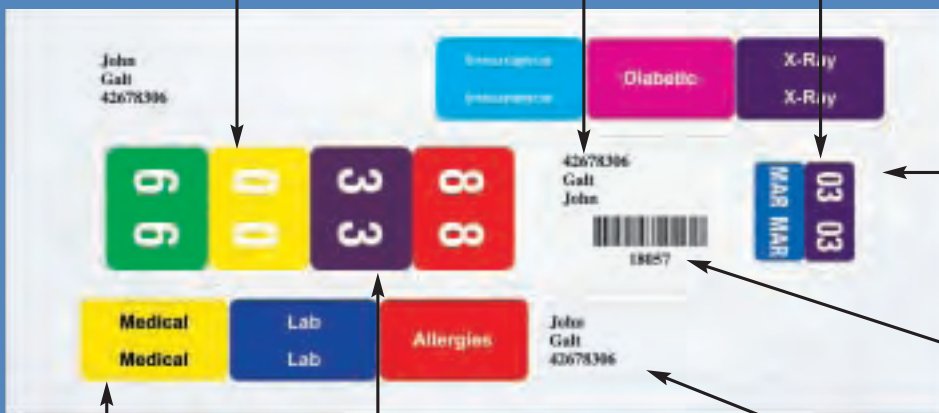

Envelope sized forms feed easily into ink-jet printers.

One piece label strip eliminates the need to apply multiple labels to folder tabs.

Print names, account numbers, or any text for quick identification.

Print optional color coded year, month or solid colored bands.

Unique alignment contours line up with folder tabs for precise label positioning.

Print bar codes for use with document tracking software.

Six optional bonus labels for index tabs or alert labels.

Vivid color coded letters or numbers print automatically, matching labels to folder tabs.

Two optional document labels print the file heading for use on folder contents.
