

Slant Files

A revolutionary concept in shelf filing, JETER designed the Slant cabinet specifically for use with color-coded files. The shelves are parallelogram-shaped, with the slant of the cabinet causing each folder to extend past the one next to it. Because you see each folder better—you file faster!

55-Degree-Parallelogram Design Displays Color-Coding At Its Utmost

Having the narrowest depth in the industry, Slant files are thinner from front to back. Letter size is only 10", legal size is 12½" and X-ray size is 15" deep. Work shelves provide a roll-out work surface at the cabinet and allow both hands to be free for filing. Spacers offer storage for "to be filed" material and "out folders."

Variety Of Space-Saving Features

Slant files allow more rows in a small space than other types of files. Twenty-four inch, 36" and 48" tiers maximize the available floor space. Two-inch and 4" bases enable the bottom tier to be easily accessed. Four-inch bases are available for letter Slant only.

Full-height welded dividers prevent shelf deflection and are placed in the proper distances to keep folders upright, yet not waste space. Letter-size Slant units are equipped with our NEW C-shaped divider which provides a platform on the top of the divider to receive the shelf above. This adds strength by providing a nesting surface for the shelf above, and is an integral part of the strength of the unit. Each divider supports the weight vertically throughout the cabinet.

*W dimension is starter-section width for Slant file only.

Strength And Stability With Fast Assembly

Heavy 18-gauge steel is used for a much stronger cabinet than other stackables. Seven drive rivets plus our steel-to-steel interconnect system secure the shelves vertically. Triangular, welded corner reinforcements provide strength and stability especially against stress created when used on mobile systems.

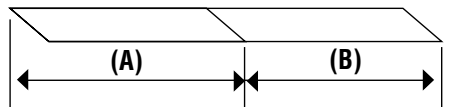

Slant files are modular so they can be stacked for easy expansion and moving, even when fully loaded. Quick assembly makes for fast setups and moves.

For a quality appearance, superior baked enamel paint finish is applied to all surfaces. Neutral Lite and Light Gray offer a non-competitive background for color coding.

Some Important Considerations

Slant files have unusual dimensions. The first section in any row is longer than the other sections in the row because each additional cabinet nests into the cabinet next to it.

TOP VIEW—Slant File Width

STARTER **ADDER**

Note: Dimension (A) is the overall width of the starter section in each row of cabinetry. Each additional unit is the overall size (B). This is because the point of each file nests into the file next to it (see table below). All Slant files are designed for left to right filing.

SIZE	(A)	(B)

Legal-size Slant file with expansion pockets.

JETER X-ray-Size
Cabinets Have The Lowest
Overall Height

X-ray-size Slant files are capable of handling the 75-100 pounds per shelf foot of X-ray films. Vertical file supports are spaced throughout the shelves, similar to building pillars, for extra strength. A JETER five-high unit is only 79" in height with a 3⁄8" shelf lip, making it one of the lowest five-high X-ray shelf cabinets available.

Legal-Size Cabinets Provide
Greater Clearance

Legal-size folders are commonly taller than their letter-size counterpart. To ensure extra vertical clearance for pocket-style folders, JETER cabinets allow a full 10¾" of height. JETER SYSTEMS is one of the few companies that makes a legal-size cabinet with these proper dimensions.
